

Engineering Intern — Crossword

Department: Engineering **Location:** Mumbai (in-office) **Work Type:** Internship, Full Time

Our Mission

Fuel customer growth through meaningful, intelligent, and safe user-to-user (and now, user-to-agent) engagement.

CometChat Overview

CometChat is a full-stack conversational platform built to unify every layer of interaction — bringing together real-time conversations (chat, messaging, voice, and video), AI Agents, moderation, notifications, and analytics in one modular, developer-first solution. Our latest product, Crossword, brings conversational AI to commerce — built for the high-transaction verticals where conversation directly drives retention and revenue.

Our company has seen rapid growth, thanks to several market validations — including our participation in Techstars Boulder Accelerator in 2019, followed by investments from experienced investors including a Series A round. We were also recognized on Forbes' 2026 America's Top 500 Startup Employers list — a reflection of the team and culture we've been deliberate about building.

We believe the interface of the future is conversation — not clicks. That's why we're building the infrastructure for the world's AI-powered conversations — from human-to-human, to human-to-agent, to multi-party collaboration with AI in the mix.

Why Join Us Now

You'll work on real AI engineering problems at Crossword, with the opportunity to build and experiment with AI-powered applications and agents. You'll gain hands-on experience with LLMs, RAG, AI agents, APIs, and modern AI development tools while working closely with engineering and product teams.

Your work will contribute to real product development rather than being limited to theoretical or observational tasks.

AI Engineering Intern

Location: Mumbai | **Work Mode:** Work from Office

Duration: 6 Months | **Work Type:** Full-Time Internship

Potential Full-Time Opportunity: Based on performance during the internship and business requirements/vacancies at the time.

About the Role

We are looking for an **AI Engineering Intern** to join Crossword's engineering team and work on building practical **AI-powered applications and agents**. This is a hands-on opportunity for students interested in working with **LLMs and Generative AI**.

What You'll Work On

- Build and experiment with **AI applications and AI agents**
- Work with **LLMs and LLM APIs**
- Build **RAG (Retrieval-Augmented Generation)** applications
- Work with **tool/function calling**
- Explore **embeddings and vector databases**
- Build chatbots and other LLM-powered applications
- Collaborate with engineering and product teams to develop and improve AI features

What We're Looking For

- Pursuing or recently completed a degree in **Computer Science, Information Technology, Engineering, AI/ML, or a related field** Strong programming fundamentals, preferably **Python**
- Hands-on experience with **AI/Generative AI projects**
- Exposure to **LLMs, AI agents, RAG, or chatbots**
- Familiarity with **LLM APIs, tool/function calling, embeddings, or vector databases** is a plus
- Experience using AI coding tools such as **Claude Code, ChatGPT Codex, or similar tools**
- Strong problem-solving skills and willingness to learn
- Available to work **full-time from our Mumbai office**

Good to Have

- **LangChain / LangGraph / LlamaIndex**
- **OpenAI / Claude / Gemini APIs**
- **Pinecone / FAISS / ChromaDB / Weaviate**
- Git/GitHub and API development experience
- AI-related personal projects, hackathons, or internships

What Makes You Stand Out

We especially value candidates who have **actually built AI projects**, such as an AI agent, RAG application, chatbot, or LLM-powered application, rather than only completing AI courses.

Our Values

Go above and beyond for the customer

We believe customer problems are our problems. We take ownership, think beyond the obvious solution, and do what it takes to build things that genuinely create value.

Be relentless

Never stop learning, experimenting, and improving. Challenge assumptions, try new approaches, and don't be afraid to fail. Focus on the outcome and keep moving forward.

Be curious

Ask questions, dig deeper, and understand how things work. AI is evolving rapidly, and we value people who are constantly learning and exploring new possibilities.

Have fun

We work hard, but we enjoy what we do. Be positive, be kind, collaborate with your teammates, and have fun while building things that matter.
